

90% waste reduction - 12 month payback

When beverage manufacturer Britvic needed to significantly reduce its annual waste disposal costs, it chose our **revolution™** waste processing technology.

Both empty and full PET and HDPE bottles are broken down by the patented screw and cutter plate technology before entering the compaction chamber where compaction ratios of 10:1 are achieved. Separated liquid is extracted, leaving only a 1% moisture content in the waste plug. As the plugs come out of they are baled and sold for recycling for about \$175/tonne.

The **revolution™** technology provided Britvic with a **simple, cost effective solution** to their production waste management challenges and successfully improved their environmental goals.

***"After only three months we more than halved our waste handling costs compared to the previous year. The installation is also playing a huge part in helping Britvic to achieve its environmental goals."** Mr. Keith Walter, Facilities Manager Britvic, Becton*
