

80% Yogurt Extraction Fewer Waste Collections

When dairy Yeo Valley Farms needed to extract the liquid from their waste stream, it chose our **revolution™** waste processing technology.

Yeo Valley's 1100 litre wheeled containers are hydraulically lifted to permit the waste product to be safely deposited into the **revolution™** processor. Yogurt container waste is compacted 14:1. The liquid content is hygienically discharged and recycled as pig feed.

The **revolution™** technology allowed Yeo Valley Farms to reduce the number of waste collections and achieve a higher standard of cleanliness in their operations.

"We have recently invested in major improvements to our processing facilities and the new processing offered by the revolution fit neatly into our new operation." Mr. Steve Welch, Technical Manager, Yeo Valley Farms
